Removable Wall Panels

Integrated solutions with removable panels provide direct access to the wall cavities, allowing maintenance teams to service electrical components without demolition.

Create privacy and confidentiality within open office spaces with our high performing acoustic meeting rooms. Functionality and collaboration can be enhanced by integrating media walls and writable surfaces. Personalise your space with bespoke graphics and finishes that reflect your brand. A wide range of acoustic ratings are achievable to meet diverse performance needs.

Acoustical Performance

A wide range of acoustic ratings can be achieved to meet performance needs.

Integrations

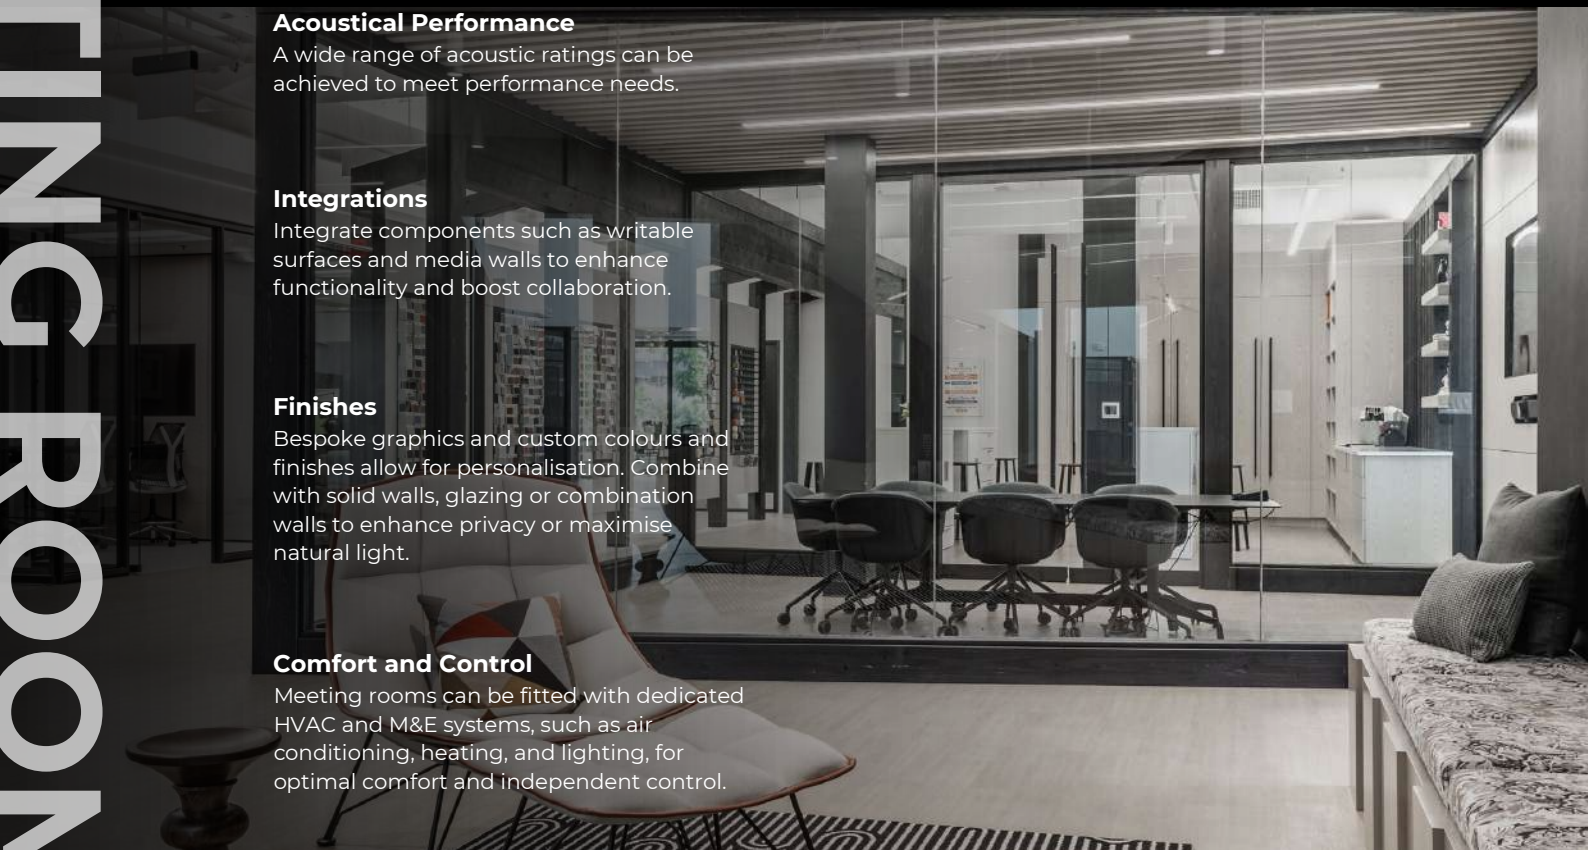

Integrate components such as writable surfaces and media walls to enhance functionality and boost collaboration.

Finishes

Bespoke graphics and custom colours and finishes allow for personalisation. Combine with solid walls, glazing or combination walls to enhance privacy or maximise natural light.

Comfort and Control

Meeting rooms can be fitted with dedicated HVAC and M&E systems, such as air conditioning, heating, and lighting, for optimal comfort and independent control.

THE *restroom*

Seamless Finish

Graphics applied directly to Architectural Wallsz's prefabricated wall systems, ensuring a clean, flush finish that enhances any interior.

Bring your environments to life with bespoke graphics that enhance branding, communication and user experience. Whether you're creating immersive healthcare spaces, intuitive educational environments, or inspiring commercial interiors, Architectural Wallsz delivers graphic solutions that combine visual impact with long-term durability.

Future Flexibility

Panels can be easily swapped or upgraded, allowing environments to evolve without major disruption or rebuilds.

Lasting Performance

High-quality, scratch-resistant and wipe-clean surfaces ensure long-lasting vibrancy, even in high-traffic healthcare, commercial or educational settings.

Precision Graphics

Factory-finished panels guarantee accurate colour matching, perfect edge alignment, and consistently sharp imagery across large spans.

Clear Communication

From large-format brand statements to functional signage and directional graphics, designs can be tailored to communicate clearly and consistently.

Durable Protection

Graphics are engineered to resist fading, staining, and wear, reducing long-term upkeep and maintaining a professional finish over time.

Precision Storage

Precision-manufactured to deliver consistent quality, accurate sizing and a seamless fit across every project.

Architectural Wallsz seamlessly integrates technology, cable management solutions, custom hardware and bespoke detailing into our joinery. Manufactured off site, our bespoke joinery arrives fully assembled and ready to install, ensuring a fast, clean and efficient fit-out on site.

Fast Installation

Delivered pre-assembled, casework reduces on-site installation time and helps accelerate project completion.

Design Flexibility

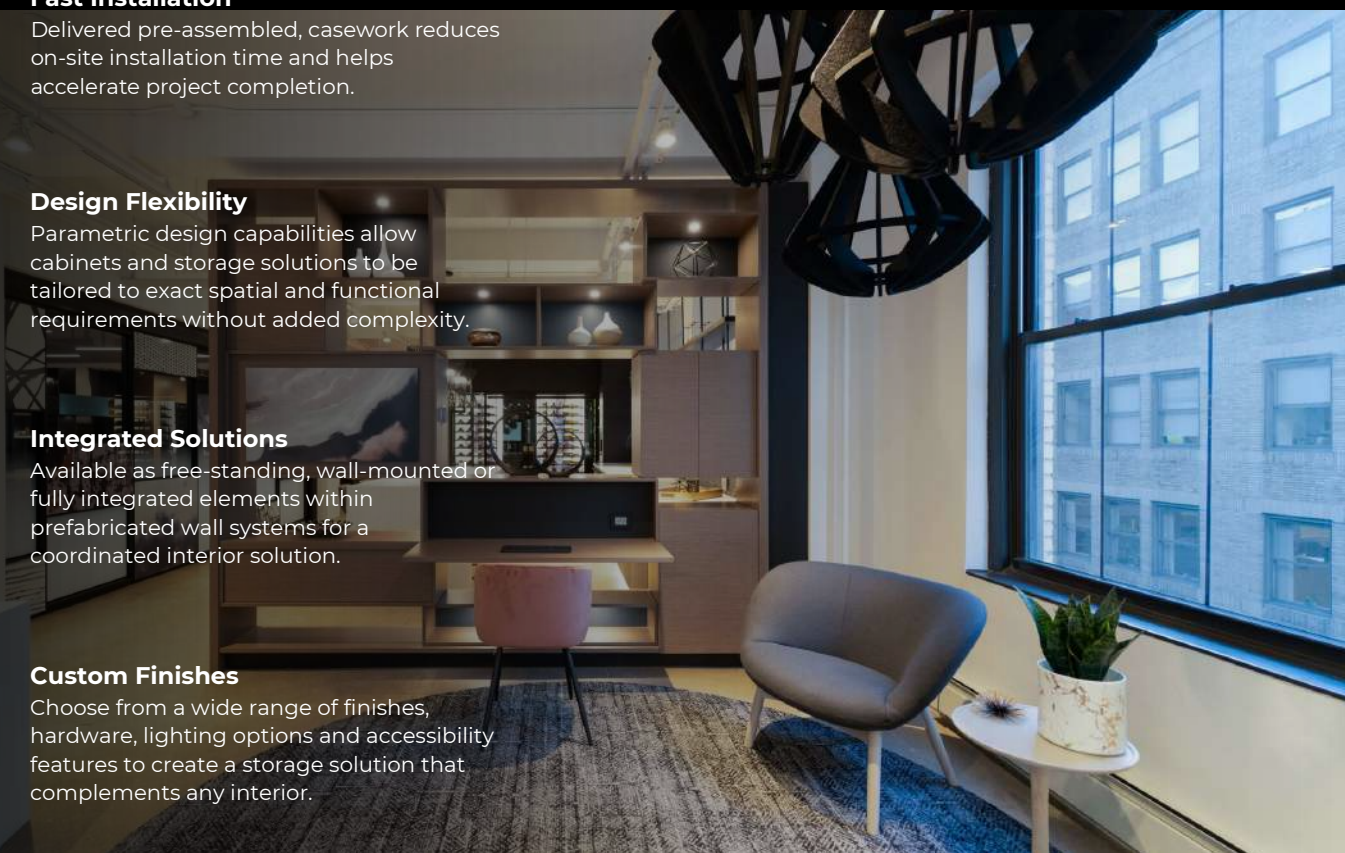

Parametric design capabilities allow cabinets and storage solutions to be tailored to exact spatial and functional requirements without added complexity.

Integrated Solutions

Available as free-standing, wall-mounted or fully integrated elements within prefabricated wall systems for a coordinated interior solution.

Custom Finishes

Choose from a wide range of finishes, hardware, lighting options and accessibility features to create a storage solution that complements any interior.

Acoustic Excellence

Automatic door sweep creates a flush seal, ideal for sound and speech privacy.

Durable Solution

Using four butt hinges, rather than the industry standard of three, allows for higher than standard durability and quality.

Swing doors deliver strength, precision, and versatility. Designed for seamless integration with modular walls, they feature robust connections and a bottom sweep for a secure seal. This attention to detail makes them ideal for meeting smoke-rating standards and achieving superior acoustic performance. Available in both aluminium and wood finishes, our swing doors combine functional reliability with design flexibility to complement any space.

Aluminium-Framed Options

Aluminium-framed doors available with 50mm, 100mm, or 150mm stiles.

Glazing Choices

Thin-profile available with single or double-glazed glass.

Glass Options

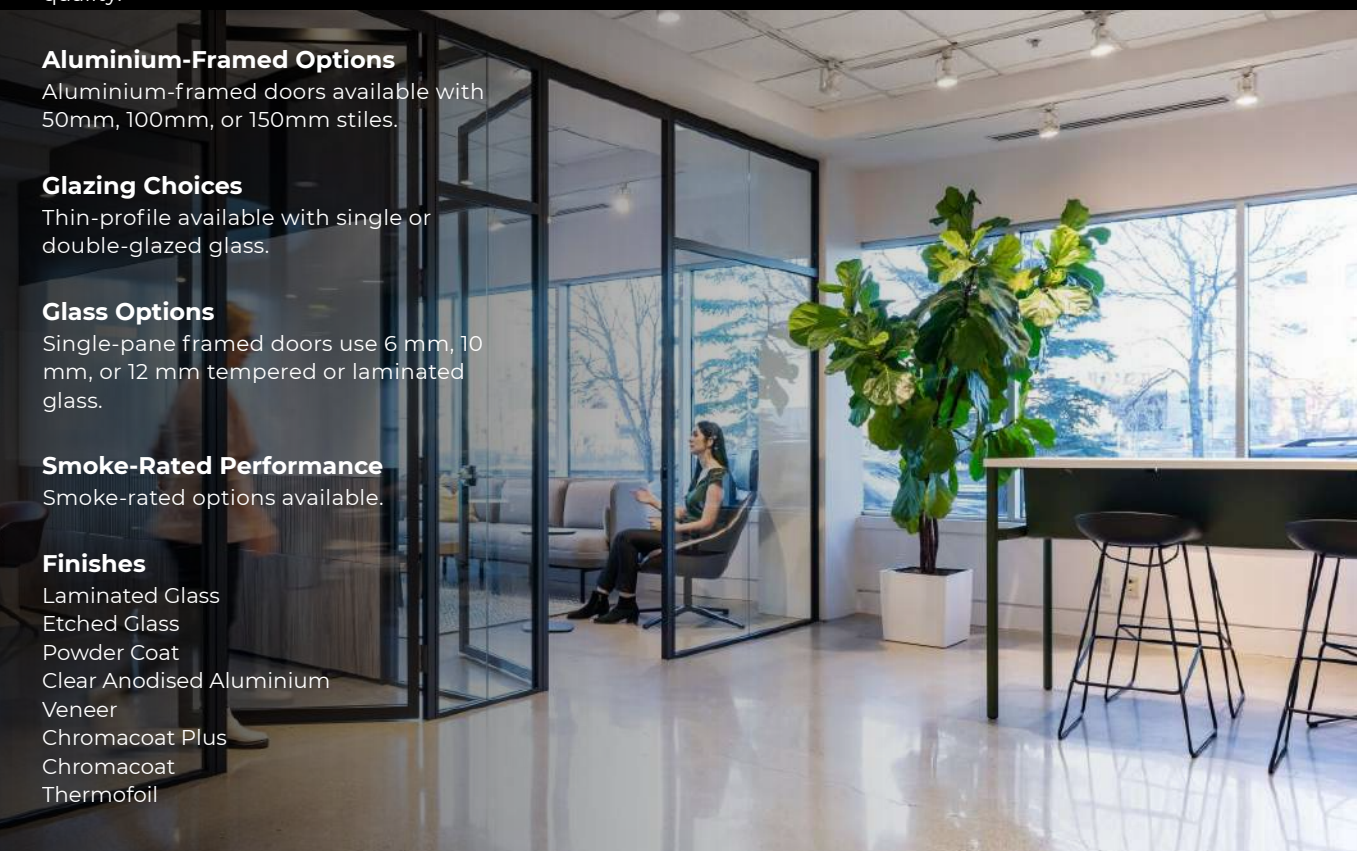

Single-pane framed doors use 6 mm, 10 mm, or 12 mm tempered or laminated glass.

Smoke-Rated Performance

Smoke-rated options available.

Finishes

- Laminated Glass
- Etched Glass
- Powder Coat
- Clear Anodised Aluminium
- Veneer
- Chromacoat Plus
- Chromacoat
- Thermofoil

Concealed Mechanisms

Roller latch mechanism and concealed closer are embedded into the top of the supporting door frame.

Pivot Hardware

Floor-mounted pivot hardware eliminates the need for slab embedding.

Adjustable Base

Aluminium door base adjusts to accommodate building variances.

Aluminium-Framed Options

Aluminium-framed doors available with 50mm, 100mm, or 150mm stiles.

Door-Opening Options

90-degree or 180-degree door-opening options.

Hardware Variety

Choose from a range of pull and lever options and optional automatic closer.

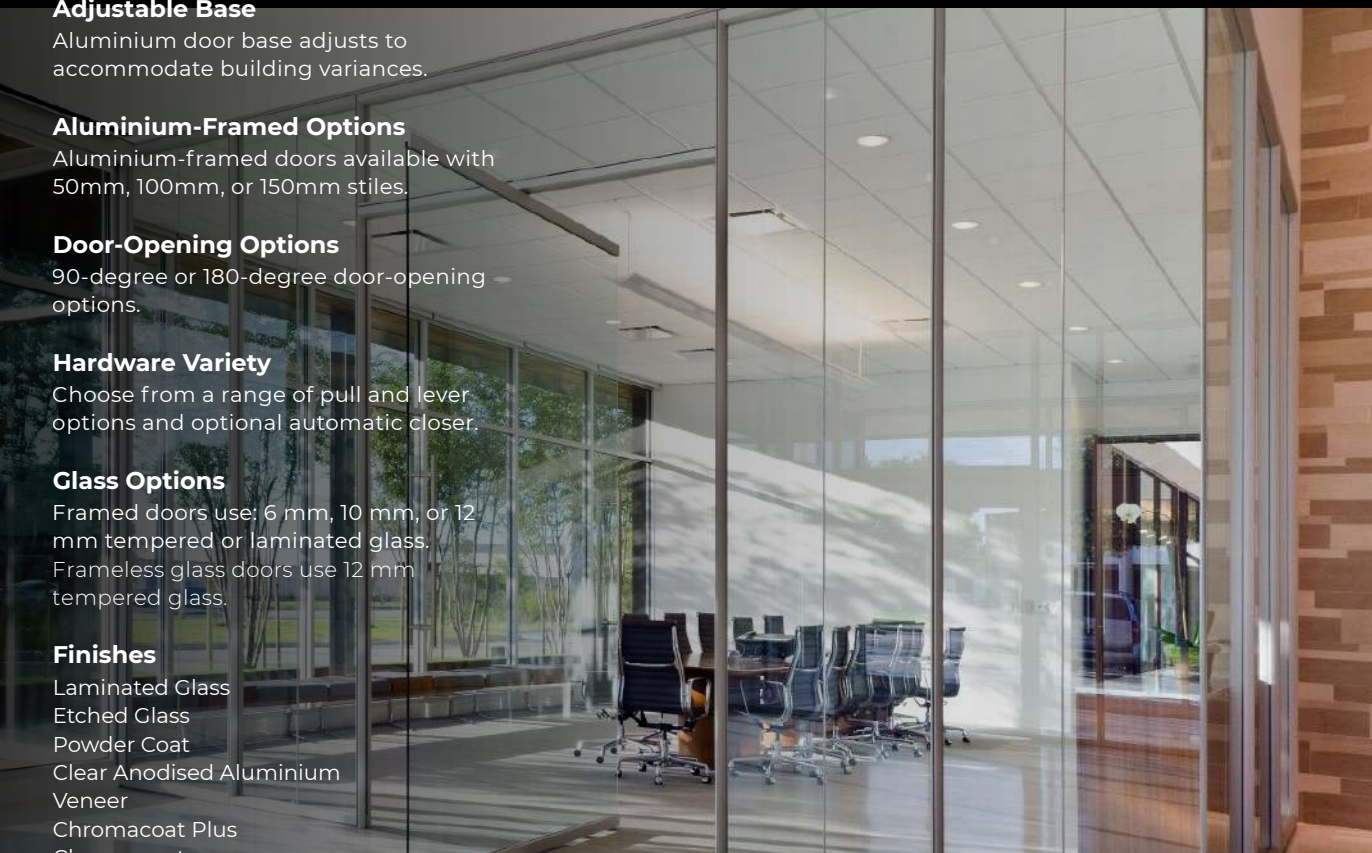

Glass Options

Framed doors use: 6 mm, 10 mm, or 12 mm tempered or laminated glass.
Frameless glass doors use 12 mm tempered glass.

Finishes

Laminated Glass
Etched Glass

Achieve the look you want and the accessibility you need with our Pivot Doors. Engineered for a clean, modern aesthetic and smooth operation, pivot doors provide wider openings than sliding doors for enhanced functionality. Choose from single or double configurations, with centre or off-centre pivots, to create a flexible and elegant solution for your space planning needs.

Uncompromised Access

No floor track delivers on aesthetics and accessibility

Acoustic Excellence

A bottom acoustical seal offers improved speech privacy.

Aluminium-Framed Options

Aluminium-framed doors available with 50mm, 100mm, or 150mm stiles.

Durable Solution

Durable soft-close and slow-down mechanisms reduces noise and extend life of the hardware.

Reconfigurable Solution

Non-handed design ensures minimal modifications are needed for future reconfigurations.

Glass Options

Framed doors use 6 mm, 10 mm, and 12 mm tempered or laminated glass. Frameless glass doors use 10 mm tempered glass.

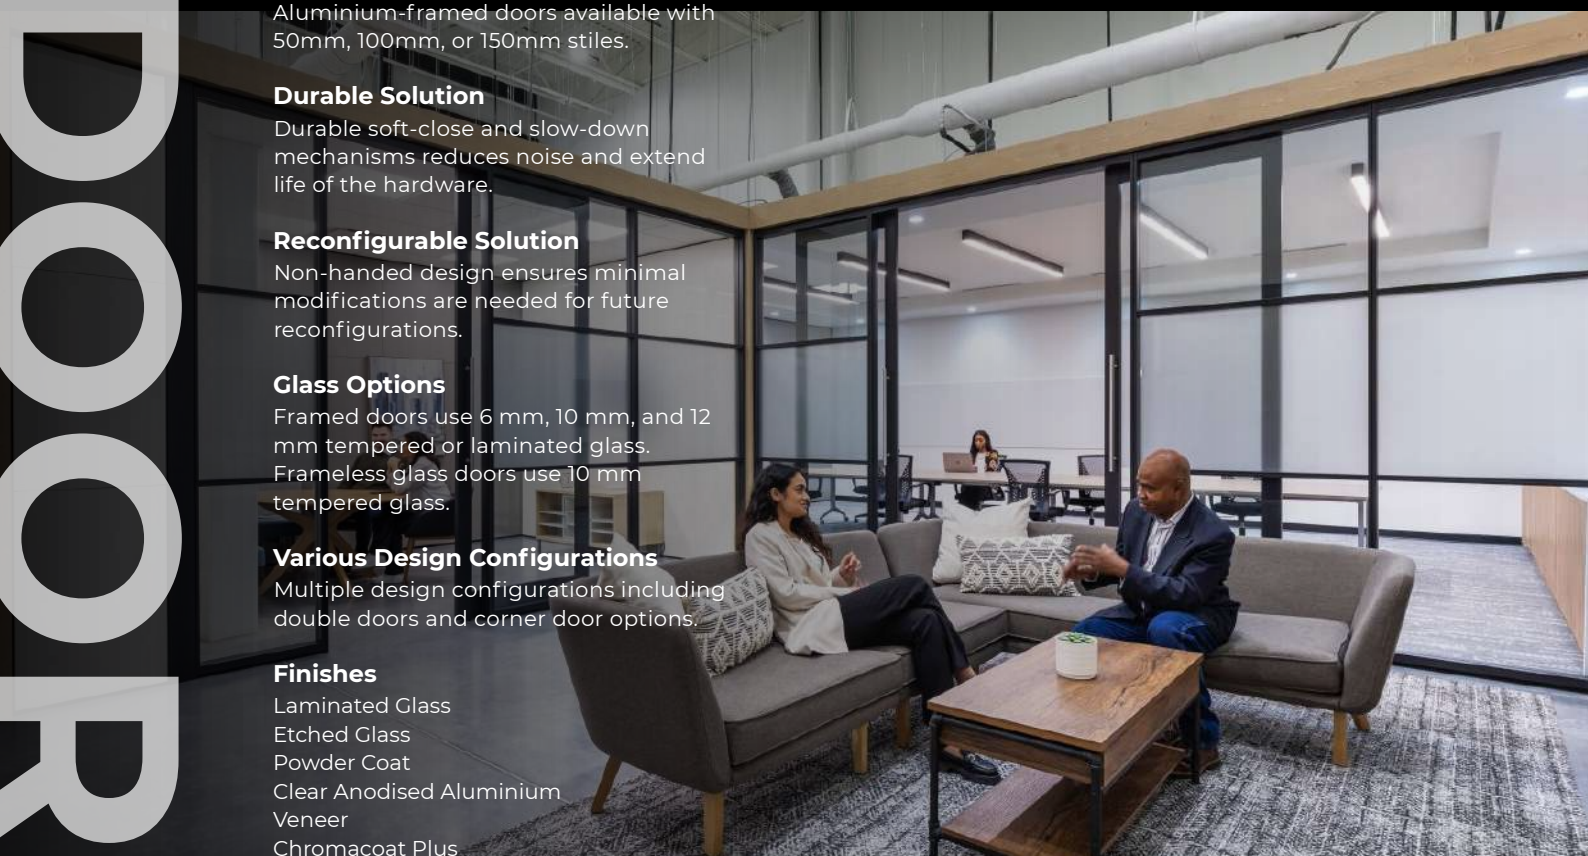

Various Design Configurations

Multiple design configurations including double doors and corner door options.

Finishes

- Laminated Glass
- Etched Glass
- Powder Coat
- Clear Anodised Aluminium
- Veneer
- Chromacoat Plus
- Chromacoat
- Thermofoil

Quiet, smooth, and easy to operate, sliding interior doors are designed to make the most of your space. Integrated hardware keeps the door flush to the wall for a clean, sophisticated look. A top-mounted track ensures unobstructed lines, while acoustic seals help maintain speech privacy. Whether installed inside or outside the room, these doors offer customisable options to suit your design vision.

Removable Wall Panels

Integrated solutions with removable panels provide direct access to the wall cavities, allowing maintenance teams to service electrical and plumbing components without demolition.

Our bespoke solid wall systems support any design or configuration, delivering high performance and long-term durability. Technology, lighting, power, and data can be integrated within the wall cavity before installation for rapid deployment. Quick, clean installs accelerate timelines, and easy-to-remove panels enable fast future maintenance. Fully reconfigurable and relocatable, this solution provides a sustainable, future-proof system for adaptable spaces.

Integrated Acoustical Performance

Recycled denim insulation offers sustainable, high acoustic rating, up to 58 RwdB.

Simple Architectural Connections

Bespoke manufactured solutions designed to fit precisely with any existing base building conditions.

Collection

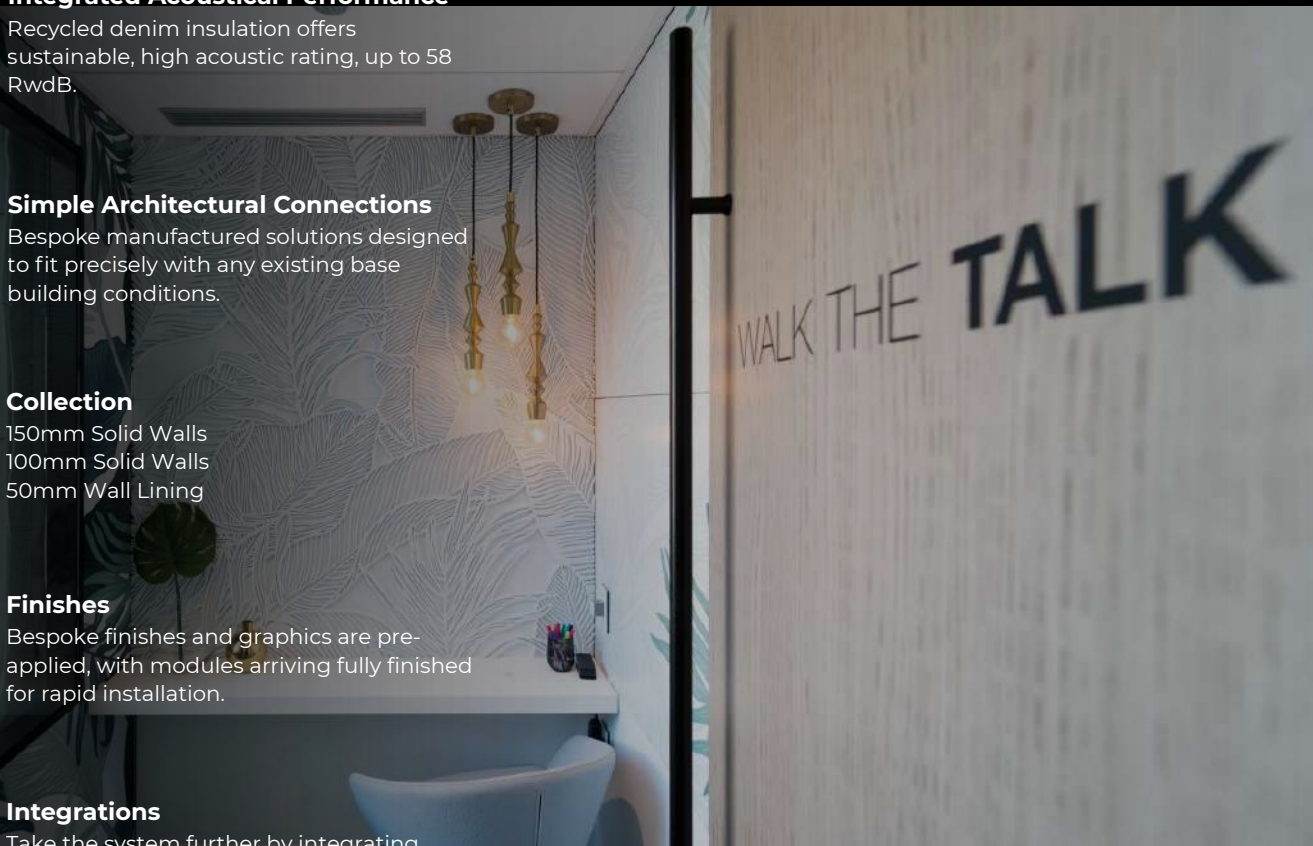

150mm Solid Walls
100mm Solid Walls
50mm Wall Lining

Finishes

Bespoke finishes and graphics are pre-applied, with modules arriving fully finished for rapid installation.

Integrations

Take the system further by integrating technology, graphics, writable surfaces, casework, and more.

Dimensions:

Height: up to 4200mm
Track Width: 27mm/32mm/100mm
Track Height: 27mm/50mm

A single glazed partition system, designed to maximise natural light while supporting acoustic privacy. Available with various deflection details for easy customisation to suit the project needs.

Acoustics:

Up to 41dB (Rw)

Structure:

BS5234; BS6180; BS6399

Joints:

Dry Joints

Deflection Head:

Up to +/-25mm

Profiles & Door Frames:

Aluminium

Glass Type:

Toughened - Laminated

Glass Thickness:

10-19mm

Finishes:

Polyester Powder Coat
Satin/Special Anodised Aluminium

Options:

Manifestations/Graphics
Switch Glass
Aluminium Banding

British Standards:

Sound Measurements BS EN ISO 140
Sound Rating BS EN ISO 717
Structural Stability BS5234; BS6180; BS6399

Natural Aesthetics

Combining the warmth of timber with contemporary glazing, these partitions bring a refined, natural character to modern interiors.

Sustainable timber framed partitioning from Architectural Wallsz offers the perfect blend of traditional style, refined aesthetic and uncompromising functionality for your commercial space. The classic timber texture is the perfect way to bring a natural touch to a work environment, while still providing a modern finish and a beautiful way to partition any space.

Light-Filled Spaces

Full-height glazing maximises natural light, creating bright, open environments while maintaining clear spatial separation.

Acoustic Performance

Engineered timber glazed systems deliver effective acoustic control, supporting privacy and concentration within busy workplaces.

Flexible Layouts

Designed to define zones and adapt to changing requirements, timber glazed partitions support agile and future-ready spaces.

Flexible Installation

Flexible mounting: fits new or retrofitted onto Architectural Wallsz's Solid Partitions or any flat vertical wall surface (other than glass).

Breathe® Living Walls offer a simple, modular way to bring real greenery into your space. This system is designed to deliver the benefits of biophilic design while fitting seamlessly into your interior environment. The scalable solution allows for small clusters of plants to full-height wall features, giving you full control over placement, density and overall impact.

Modular Integration

The modular system includes support slats, troughs, watering hoses and removable plant pots for easy integration and maintenance.

Self Irrigation

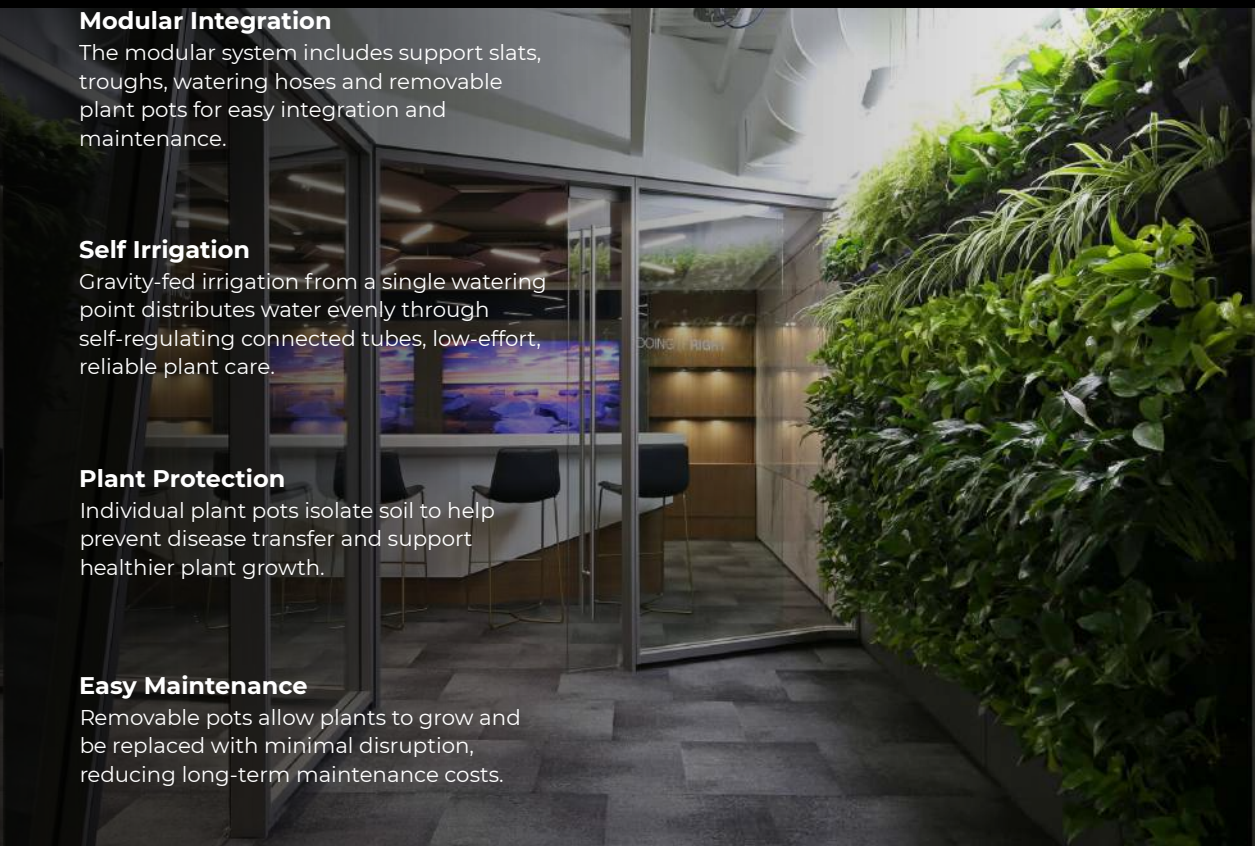

Gravity-fed irrigation from a single watering point distributes water evenly through self-regulating connected tubes, low-effort, reliable plant care.

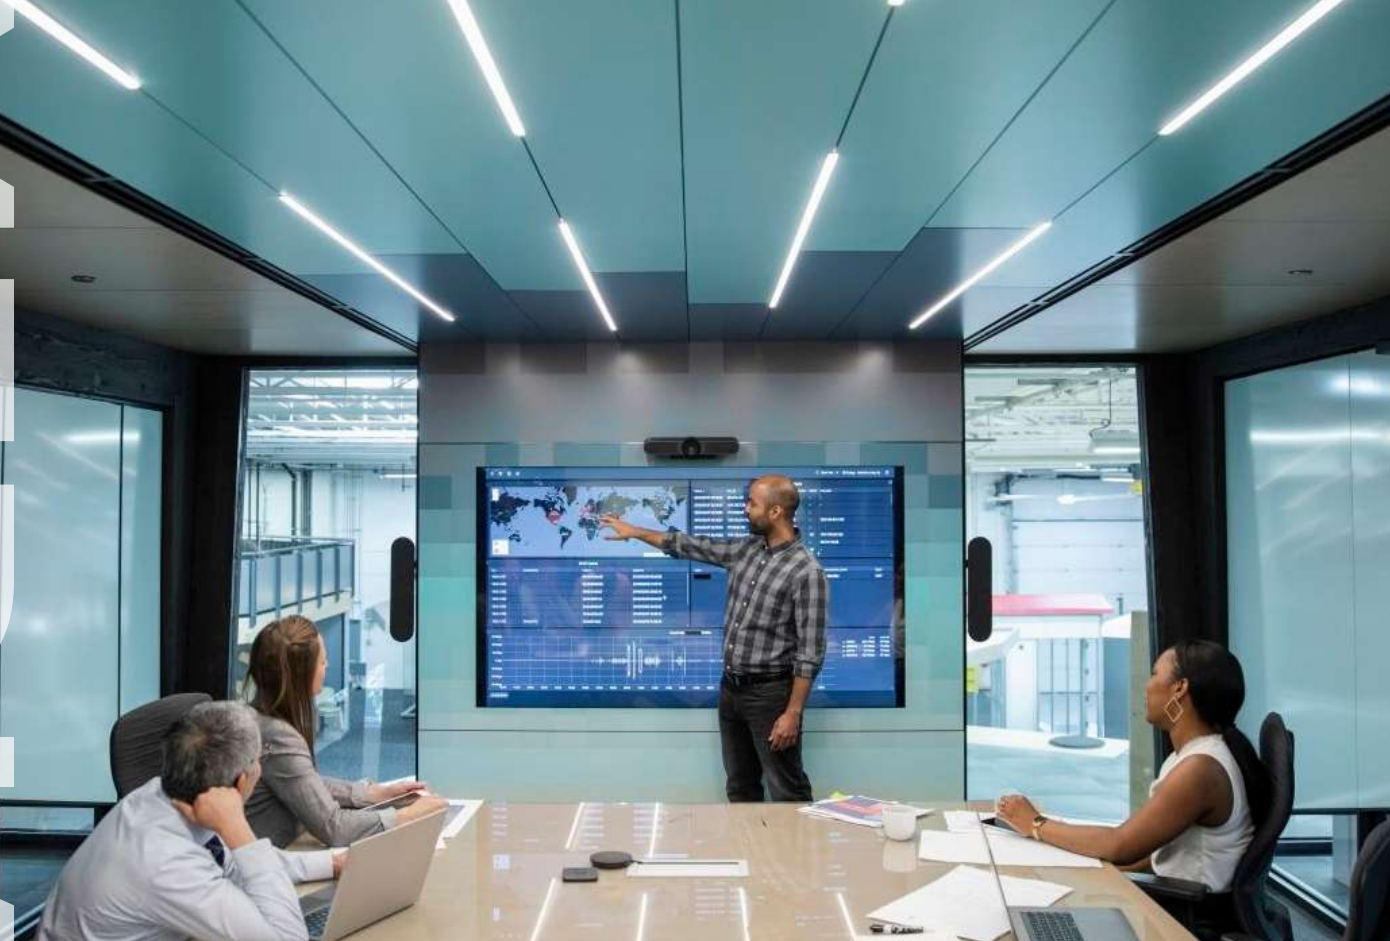

Plant Protection

Individual plant pots isolate soil to help prevent disease transfer and support healthier plant growth.

Easy Maintenance

Removable pots allow plants to grow and be replaced with minimal disruption, reducing long-term maintenance costs.

Removable Wall Panels

Integrated solutions with removable panels provide direct access to the wall cavities, allowing maintenance teams to service or update electrical components without demolition.

Our walls provide a variety of options to integrate audio, visual and telecommunication hardware into the design of your space. Wall-mount devices or get a clean, modern aesthetic by seamlessly embedding technology directly into your walls. Get the functionality you need today with the power to update in the future as technology advances.

Integrated Acoustical Performance

Recycled denim insulation offers sustainable, high acoustic performance.

Applications

Devices can be mounted directly onto the wall or housed within the wall cavity for a seamless look and added protection.

Upgrade with Ease

Adaptable construction system, allowing you to update evolving technology with ease.

Displays

- Solid Integrated Display
- Glass Integrated Display
- Casework Enclosure
- Wall-Mounted Display
- Recess-Mounted Display
- Bespoke Applications

Simple Architectural Connections

Bespoke manufactured solutions designed to fit precisely with any existing base building conditions.

Our moving Leaf Wall delivers functionality without compromising design or aesthetics. This retractable system allows you to open or divide rooms effortlessly, creating adaptable spaces. Customisable in a wide range of dimensions and finishes, it integrates seamlessly into your design and installs quickly for ease of use. Fully reconfigurable and future-proof, it ensures your space evolves with your needs.

Independent Dual-Sided Design

Both sides of the wall operate independently, allowing distinct panel configurations, aesthetics, and functionality on each side.

Finishes

Solid wall panels can be customised with a range of finishes.

The Support System

The support system can be timber, stained with any bespoke colour, or a steel beam.

Flexible Wall Lengths

Bespoke lengths are available, and extended spans can be achieved with an optional bi-fold system.

Hinge and Track System

The moving wall consists of modular wall panels connected by folding hinges, a roller track, a docking module on one side, and a surrounding support structure or beam.

Pre-Engineered Design

Pre-engineered modules streamline the process, removing the need for additional design time or specialist engineering.

Pre-engineered slat wall systems that add natural warmth and biophilic design to commercial environments. Available in a range of standardised sizes, these modular solutions provide fast, reliable space separation. Manufactured with precision-cut channels and shipped pre-assembled, our slat walls install quickly and cleanly, helping projects move from approval to on-site completion rapidly.

Fast Installation

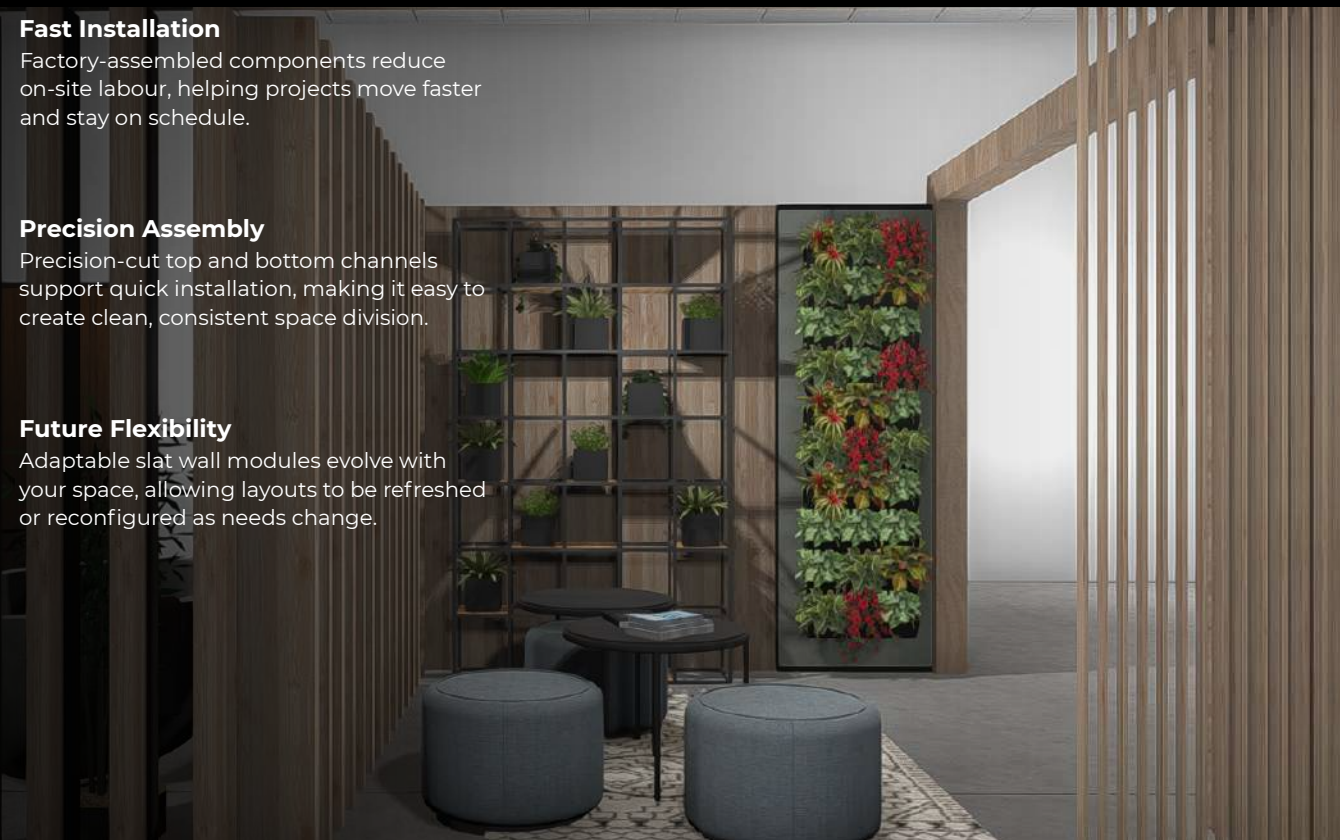

Factory-assembled components reduce on-site labour, helping projects move faster and stay on schedule.

Precision Assembly

Precision-cut top and bottom channels support quick installation, making it easy to create clean, consistent space division.

Future Flexibility

Adaptable slat wall modules evolve with your space, allowing layouts to be refreshed or reconfigured as needs change.

Engineered Strength

Crafted from glue-laminated, cross-laminated, and other engineered timber products, delivering strength, stability and architectural flexibility.

Made from engineered wood products, Architectural Wallsz Timber Frames support sustainability goals while offering complete design freedom. Complex angles, expressive forms, and fully custom applications integrate seamlessly with the wider prefabricated components, allowing you to build bold features, canopies, mezzanines, seating areas and more.

Sustainable Choice

A renewable, low-carbon material that helps support sustainability goals.

Seamless Joinery

Wood-on-wood joinery creates a clean, seamless aesthetic while enabling a fast, sequential installation process.

System Integration

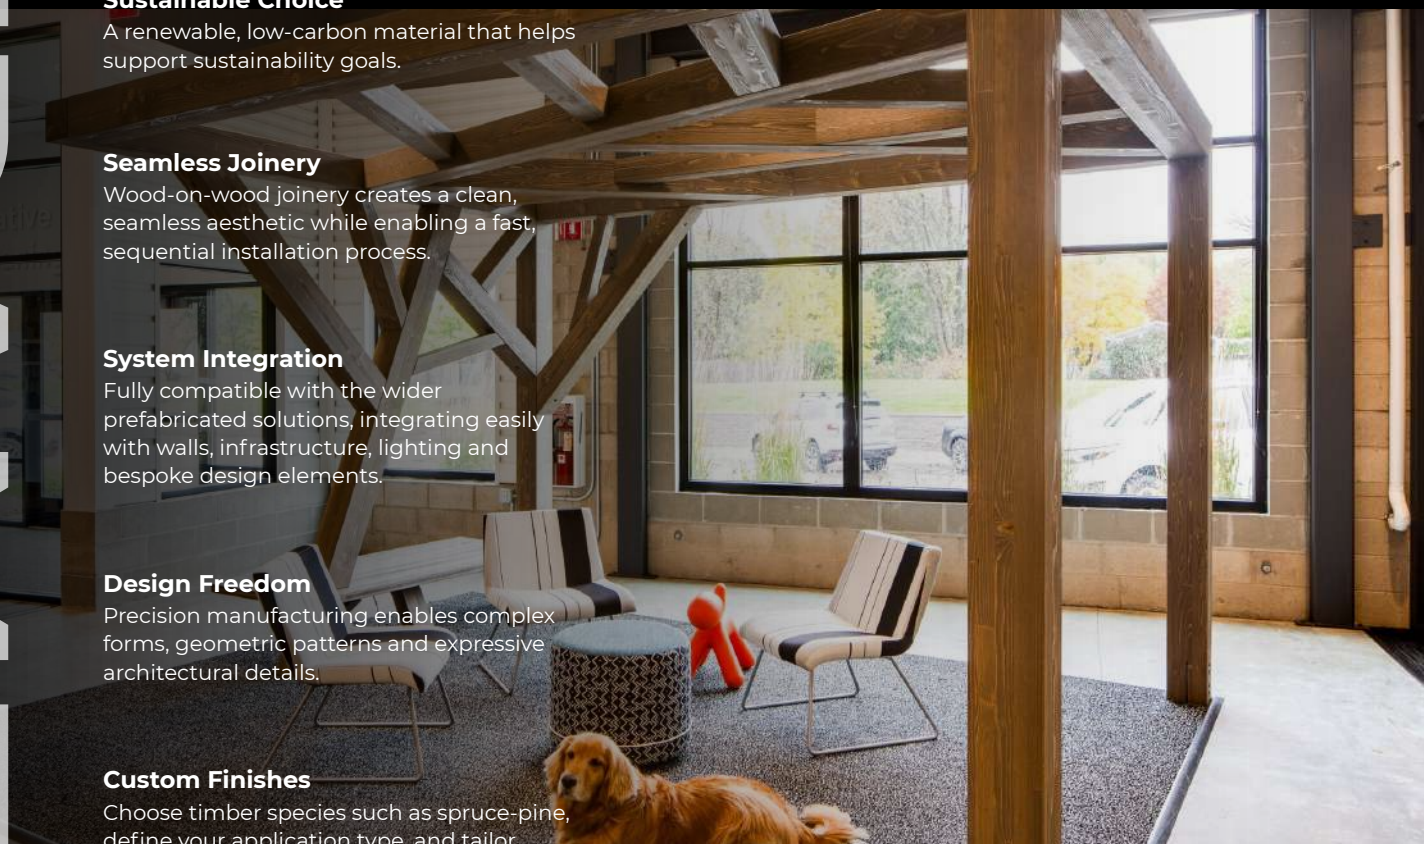

Fully compatible with the wider prefabricated solutions, integrating easily with walls, infrastructure, lighting and bespoke design elements.

Design Freedom

Precision manufacturing enables complex forms, geometric patterns and expressive architectural details.

Custom Finishes

Choose timber species such as spruce-pine, define your application type, and tailor finishes with clear coats, water-based stains, custom colours, or Class A options. Brushed grain textures add a tactile, natural feel.

Finishes

WriteAway Film
Backpainted Glass
Magnetic Markerboard

Integrate writable surfaces directly into your walls to enhance collaboration and elevate your space. These finishes offer a sleek, modern alternative to traditional whiteboards, combining style with functionality. Choose decorative glass panels or apply a durable, easy-to-clean writable surface directly to durable MDF.

Bespoke Solution

Integrate bespoke colours and graphics to support your brand. Available in glass, gloss, or matte finishes and magnetic capabilities.

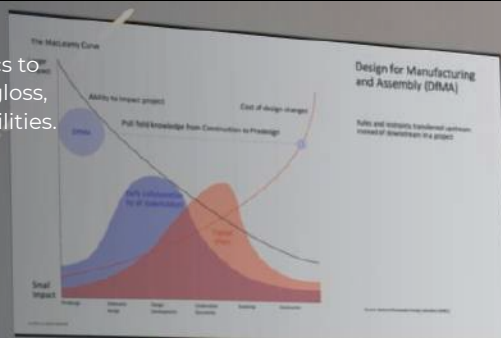

Integration

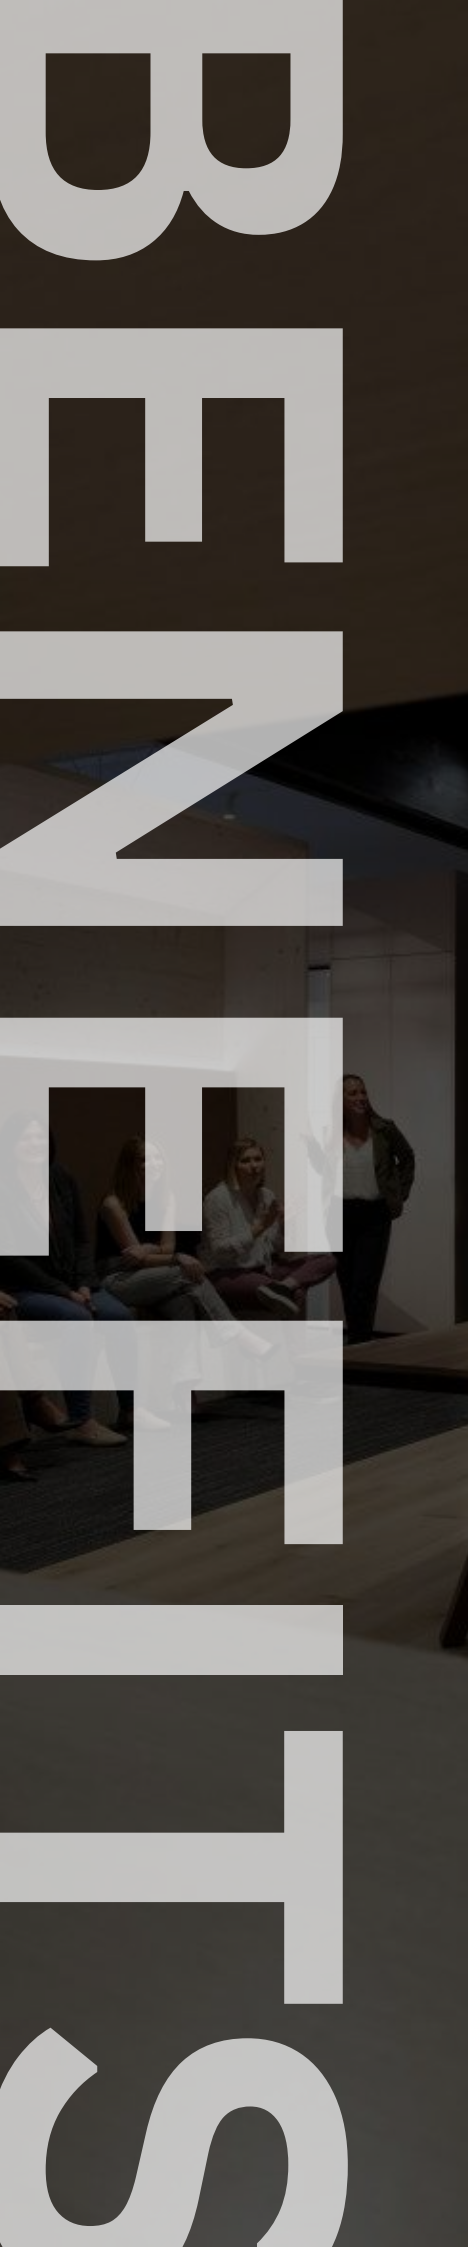

Integrate with solid wall partitions or combination walls*.

*Combination of glazing and solid wall

Enhanced Collaboration

Combine with media walls or integrated technology for additional functionality enhancing collaboration.

Reduced Project Timelines

Prefabricated solutions streamline construction by enabling concurrent site preparation and offsite fabrication, ensuring faster project delivery.

Cost Saving

We offer accurate cost estimates and reduced onsite labour for better budget control. Our modular designs also allow for adaptability, enabling future cost savings.

Consistent High-Quality

Prefabricated components ensure superior quality, uniformity, reduced onsite variability, and enhanced safety through controlled manufacturing.

Design Certainty

Using our ICE software to deliver accurate visuals, that are then sent straight to the manufacturer, ensuring precise execution and eliminating traditional discrepancies.

Sustainable Approaches

Our solutions adapt for reconfiguration and expansions, enabling facilities to meet changing needs, reducing waste, and supporting sustainability.

Efficient Maintenance

Simplified maintenance with standardised components ensures long-term reliability and lowers lifecycle costs for easier, more manageable, cost-effective upkeep.

Streamlined Site Logistics

Efficient onsite assembly reduces disruptions, optimises coordination, leading to smoother execution with minimal impact on surrounding spaces.

Enhanced Risk Management

Prefabricated solutions reduce risks related to installation errors, quality inconsistencies, and project delays, ensuring safer, more reliable, and efficient construction process.
